

BACKGROUND OF EXPLOSIVE ELECTRIC EQUIPMENT

We are committed to considerate environmental behaviors, and we are bringing you the opportunity to hand over your retired electrical and electronic equipment simply and free of charge.

The consumer has an essential role in the electricity management system. He is the one who decides what to do with the old appliance. Old and unneeded electrical equipment does not belong to communal waste containers.

The consumer must be informed by the symbols below that the relevant electrical equipment is not in municipal waste. All new electrical appliances are marked accordingly. The symbol may be displayed directly on the device, on its packaging, in the instruction manual or in the warranty card.

How to get rid of old appliances?

Via a publicly available collection network in a particular country.

Why recycle?

Electrical equipment contains many recyclable materials, such as metals, plastics, glass. Part of the appliances are also very dangerous substances for the environment and human health, especially mercury, lead and cadmium.

Delivering electrical equipment to the take-back site, thanks to material recycling, saves primary sources of raw materials and at the same time protects our environment from potential improper handling.
